

Fuel Switching from Coal in MISO and SPP

Combined MISO/SPP Coal Switching – 2005 to 2015

- 2005 is base year for Clean Power Plan targeted CO₂ reductions
- Coal demand in MISO and SPP should maintain near current levels until significant development of competing generating technologies occurs or CO₂ compliance begins

- Even though MISO/SPP 2015 coal capacity is 38%, coal generation equals 51%
- MISO and SPP reflect over 50% of Powder River Basin coal demand

Combined MISO/SPP 2015 Generating Capacity Mix
